Report on: Potash, Rob L

Dear Dr. Harris:

Thank you for referring Rob Potash for HUMAC/NORM isokinetic testing. The Patient has a diagnosis of ACL Tear.

The following graphs show the force curves of the Right vs. the Left superimposed, showing a comparative picture of the individual's ability to produce force throughout the ROM.

In normal subjects, imbalances of 10% or less can be considered normal while differences of 10% to 20% possibly abnormal and those 20% and above probably abnormal.\* The patient produced the following torques:

Muscle	Right	Left	Deficit
Extensors	163.00	124.00	24%
Flexors	113.00	115.00	-2%

The patient would benefit from physical therapy to increase strength. My treatment plan will include E Stim. If you have any comments or suggestions concerning this patient, contact me directly at 781-297-2034.

Sincerely,

**Rob Potash**

Robert L. Potash  
Physical Therapist
